

The New York State-Local Internet Gateway Prototype Project: Current Practice Research

Thu, 01 Jul 2004

Christina M. Pagano, Meghan E. Cook

In the fall of 2002, the Center for Technology in Government (CTG) at the University at Albany conducted current practice research to identify and examine existing government to government (G2G) portal projects. The purpose of this research was to determine if single sign-on intergovernmental portals, that channel business functions across programmatic areas and levels of government, exist in New York State or in other states. And, if they do exist, what are the policy, management, technological, financial, and other factors that influenced their development. Further, this research was to help inform the development of an intergovernmental prototype project at CTG.
