

The Austrian Federal Budgeting and Bookkeeping System (Case Study)

Tue, 12 Sep 2006

G. Brian Burke, Anthony M. Cresswell

The goal of the Austrian Federal Budgeting and Bookkeeping System project was to redesign and integrate the electronic workflow of the federal government's budget and bookkeeping processes. The strategy they chose was to implement a single Enterprise Resource Planning (ERP) software standard throughout the federal government, along with the adoption of necessary legal authority.
