

Constructing the New York State-Local Internet Gateway Prototype: A Technical View

Fri, 01 Apr 2005

The New York State-Local Internet Gateway Prototype was built to test the idea of a single point of contact for government-to-government (G2G) work among multiple state and local governments in range of policy areas. The Prototype channeled multiple G2G business functions through a secure, single sign-on, role-based system accessible through the Internet. The goal of the Prototype was to assess management, policy, technology, and cost implications likely to be associated with the development of a full-scale G2G system and to understand what would be necessary for state, county, and municipal governments to realize greater efficiency, high quality authentic data, and more consistent and coordinated services.
