

## User-front-end oriented development tools

---

Companies and products in this category are only mentioned for the sake of completeness and because most integrate into the systems in the other two categories.

1. Macromedia's DreamWeaver
2. Microsoft's FrontPage98
3. GoLive Systems' GoLive Cyberstudio
4. Adobe's Pagemill

Beside page authoring these products also let the developer perform web site management to various extents. Their foremost focus is however on web publishing rather than transaction processing support.
