Building Capability for Government Transformation

A Visioning Workshop for Government Leaders
A Vision for Transformation

• Building a vision for transformation is a foundational step toward change.
Vision, Capability, and Action

• With a vision to guide action, governments must then ensure they have the infrastructure and capability necessary to achieve that transformation.

• Critical elements must be in place, including information policies, governance frameworks, interoperability standards, public value projections, and organizational will.
Goals of the Workshop

• To present visionary perspectives on the role of technology in transforming government.
• To build an understanding of the critical elements policies, frameworks, and standards—that support the transformation agenda of a country.
• To provide practical advice for government leaders to apply these concepts within their countries.
Workshop Approach

• A mix of expert speakers
• Large group discussions
• Small group discussions
• Building an action plan
