Summary

A successful effort to improve justice information integration depends on convincing leaders at all levels of government of the importance and benefits of integration. The US Department of Justice, through the Office of Justice Programs, commissioned CTG to provide a guide for developing an effective business case to present to those leaders. The result was a Guide for making an effective business case for integration projects to elected leaders and senior executives.

The Guide is based on:

• A reconnaissance study of the information integration issues, barriers, and resources typical at different levels of government and in different kinds of agency and community settings.
• An intergovernmental workshop to establish what should be in a business case and strategies for presenting it.
• Analysis of the requirements for preparing a multifaceted business case for use in different settings.

The Guide also includes links and references to a rich set of resources to support integration project planning and business case development.

And Justice for All: Designing Your Business Case for Integrating Justice Information
Mon, 01 May 2000

Efforts to improve public safety in the United States are pointing to an increasing need for justice agencies to share information. This guidebook offers a series of lessons and tools justice officials can use to build business cases to win support and funding for integrated justice information systems.

Public safety is a huge issue in the United States. Agencies can help make our communities safer by quickly and easily sharing accurate, timely information about cases going through the justice system. Integrated justice information systems are the vehicle for such enhanced information exchange.

This guidebook offers a series of lessons and tools that justice officials can use to build business cases to win support and funding for integrated justice information systems. The business case blueprint leads readers through the analysis, design, and presentation of business cases tailored to specific projects and audiences. The guidebook also contains appendices of useful tools, references, examples, and resources.

In addition to the full report, you can also see an Executive Briefing.

Reconnaissance Study: Developing a Business Case for the Integration of Criminal Justice Information
Thu, 01 Sep 1999

This study provides a complex but optimistic picture for improving the integration of justice information. It provides an analysis of the current integration realities and discusses enablers and barriers to criminal justice information integration.

To be effective, a business case for criminal justice information integration must be specific about its objectives, practical in its approaches, and realistic in assessing its prospects for success. This study, based primarily on 26 interviews conducted with participants involved in integration initiatives at state and local levels nationally, provides a complex but optimistic picture for improving integration.

The report, consisting of an in-depth analysis of the current integration realities, reveals keys for success, as well
as barriers to overcome in order to achieve integration goals. It serves as a basis for designing the business case material CTG has agreed to develop for the US Department of Justice Office of Justice Program (OJP).

This project was supported by Award No. 1999-LD-VX-K004 funded by the Bureau of Justice Assistance, Office of Justice Programs, US Department of Justice. The opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the Department of Justice.

Original Scope of Work

One of the key factors identified through a series of discussions the U.S. Department of Justice (DOJ), Office of Justice Programs (OJP) has had with state and local agencies is the need for outreach to leaders, at all three levels of government, concerning the importance and benefits of integration within the criminal justice systems integration.

In a meeting attended by representatives of 25 states, participants expressed a strong need for a "business case" for integration that can be promoted nationwide. The report of that meeting states:

"Executive level sponsors are critical to state and local initiatives... There is a need to develop an outreach/education strategy immediately. The strategy should be based on a business case and include a mission statement for the Integration Initiative. Emphasis should be on reaching elected officials and senior policy makers."

The report also emphasizes the need for a definition of "integration," and acknowledges that the term means different things to different people.
CTG assisted OJP in the development of a "Business Case for Criminal Justice Systems Integration" by working with a selected group of federal, state, and local officials to describe the audiences they must address, the issues these audiences face, and the arguments that will be persuasive to them. Equally important, this work further addresses the interplay of federal, state, and local needs, resources, and goals that were a major feature of the DOJ-sponsored meetings. The results recommend tools and strategies to help elected leaders and senior executives understand their roles and choices.

The Center assisted in this work in several ways:

- Conducted a brief reconnaissance study of the issues, barriers, and resources typical at different levels of government and in different kinds of agency and community settings.
- Conducted an intergovernmental workshop to establish the common and unique criteria by which different categories of policy makers assess investments in integrated systems and programs.
- Prepared a multi-faceted business case for use in different settings.
- Developed a report to the Office of Justice Programs about the conflicts, synergies, and gaps that need to be addressed in national policies and programs to promote integration.
